

MATHERS SAFETY SNAPSHOT

Each week the Mathers Safety Team meets to review on site incidents and track trends across the company in an effort to increase transparency and to develop proactive plans to mitigate reportable incidents.

TEN BASIC RULES FOR SAFE RIGGING

This week we continue our months long focus on rigging safety. Below are ten steps for ensuring a safe rig.

- Determine the Weight of the Load
- Determine the Proper Hitch for the Load Type
- Understand Angles/Tension on Slings
- Select the Right Sling Based on Load Type
- Select the Right Hardware for the Load
- Inspect Each Sling Before You Load It
- Inspect Rigging Hardware Before You Use It
- Protect Slings From Cuts and Tears
- Determine the Loads Center of Gravity
- Pay Close Attention to Detail at Lift Time

For more information on each of these rules view the full guide here: <http://bit.ly/42jw71U>
